Wholesale Price List

1950 Crop

The presentation of our 1950 wholesale price list marks our 20th year in the field of commercial Lily culture and we are pleased to be able to offer to the Trade a most complete selection of species and hybrids, all bulbs grown in the Pacific Northwest and available for delivery during the coming fall season. In addition to the varieties listed we grow moderate quantities of a number of other Lilies and welcome inquiries concerning any which are commercially available at the present time.

During the 1949 season we introduced several new hybrid lilies to the Trade, namely Galahad, Red Bird and Viking from the original stocks produced by Dr. E. F. Palmer, Vineland, Ontario, Canada, and the strain of Aurelian Hybrids, Special Selections and Aurelian Hybrid "Mei Ling". The Trade response to these offerings was most encouraging and they will all be found included in our current descriptive list.

For the present year we are introducing three new hybrid strains, one new hybrid clone and a new form of an older species—all of which we believe are most valuable additions to the stocks of American grown lilies. Listed in alphabetical order their descriptions follow:

L. Chehalem Hybrids—Large, shapely trumpet lilies of heavy texture and fine quality, having a trace of L. Henryi in their ancestry. In color they vary from waxy white to cream with throats of yellow, apricot or pale green. Height 5 to 6 feet. Flowering through July.

L. Grenadier Hybrids—A group of select seedlings from the same original cross as L. Grenadier (Maximowiczii Wadai x Dauricum Wilsonii) which received the first class certificate of the Massachusetts Horticultural Society when first exhibited in 1946. We find but little variation in this group from the original selection, mainly in height from 3 to 5 feet. The large broad petaled flowers are held horizontally, open flat with slightly recurved petal tips and are Chinese coral in color with oval dots of garnet brown. Extremely hardy and of easiest culture. July flowering.

L. Sargentiae x Centifolium Hybrids—A very robust group of new hybrids, parentage as indicated, flowering in August with large white trumpets of great substance. The external coloring varies considerably, the majority being greenish brown to reddish brown with yellow throats. These plants carry stem bulbils same as Sargentiae but are larger flowered and taller—5 to 7 feet.

L. Speciosum Album (New Form)—A very superior new white speciosum, with larger flowers of great keeping quality. The light greenish midrib and golden anthers serve to accentuate the clear white flower. Tall, robust plant with broader foliage than other forms and the flowers do not recurve as much. Height 5 feet. August flowering.

L. Valiant—Our newest introduction from Dr. E. F. Palmer's hybrid stocks, this plant is a sister seedling of L. Red Bird ([Croceum x Elegans Mahogany] x Tigrinum). The large flowers, however, are held somewhat more upright than in Red Bird and are deep cardinal red, heavily dotted black. Established bulbs carry stems up to 5 feet with a raceme of 12 to 16 flowers which open quite flat and recurve at the tips. Bears bulbils somewhat less freely than L. Tigrinum. July flowering.

In addition to the above described new lilies we are again able to offer stock of the true L. T. A. Havemeyer, undoubtedly one of the most outstanding hybrids introduced in the past 15 years. This lily represents the first successful crossing of a trumpet and recurved lily (L. Sulphureum x L. Henryi) and the ensuing years have not diminished its beauty.

SALES AIDS

Our "Reference Chart of Lilies for Garden and Greenhouse" is now in its third printing. This Chart contains over 2,000 items of cultural information concerning the majority of lilies in commerce and is available at \$1.00 per copy postpaid. We are prepared to quote quantity prices on the Charts for resale on request. A number of our customers are offering this Chart along with their catalog listing of lilies.

As mentioned in our last year's Trade list, we now have available a new set of color transparencies for lecture and sales aid use. This set has been expanded during the past year and the list now includes over 200 subjects from which to choose. These photographs can be supplied as slides (2 x 2), enlarged transparencies in sizes 2¼ x 3¼ and larger or as color prints. A complete list of subjects available and details of their cost will be sent promptly upon request. In corresponding kindly advise whether slide, enlarged transparencies or prints are needed and approximate quantity.

In the following price list we have endeavored to briefly describe all of the stock offered by indicating flower type and size, color, height (maximum average for mature established bulbs) and flowering period under Northwest climatic conditions. All hybrid lilies are so indicated, all others are species or varieties of them.

New Lily Book Big Garden Aid

A noteworthy addition to the literature on lilies is the newly published "Reference Chart of Lilies for Garden and Greenhouse" by Edgar L. Kline, lily grower of Lake Grove, Or. In easily accessible form, this gives needed information about 224 species and varieties of lilies. The information is compiled from experience under northwest conditions, and includes correct name, origin, approximate flowering date, flower type and size with illustrations of the various types, color, height, planting instructions, preferred exposure, fragrance adaptability to greenhouse culture and directions for growing from seed.

The chart comes in convenient booklet form, but can be readily separated into sheets and mounted as a continuous wall chart for greenhousemen, bulb dealers or instruction classes.

It would be hard to find a more complete or easily consulted compendium of practical lily information in brief form. Amateurs will find it a guide to choice of varieties suited to their own garden conditions, and will doubtless be led on by it into the exciting adventure of lily growing. The chart is priced at \$1.00. —From The Sunday Oregonian, June 23, 1946.
